SKIN TREATMENTS

Specification Sheet

HydraFacial with Facial Analyzer

The HydraFacial with Facial Analyzer combines professional facial treatment technology with an advanced skin analysis consultation experience.

Designed for modern aesthetic clinics, this solution allows practitioners to assess the client's skin and then create a personalised facial treatment approach based on their individual skin needs. The treatment process can incorporate analysis, cleansing, exfoliation, extraction, hydration and personalisation, and may be incorporated into programmes addressing dehydrated- or dull-looking skin, uneven appearance, congestion, enlarged-looking pores, rough texture, fine lines, and general skin maintenance and rejuvenation — always following an appropriate consultation with a trained practitioner.
