Beauty Light LED System

It is known as one of the most effective and non-invasive ways to help rejuvenate and repair the skin. LED stands for Light Emitting Diode. It utilizes types of light (red, blue, yellow optional) which gives energy that stimulates your cells, thereby increases the production of collagen and elasticity. In response, this makes your skin firmer, less wrinkled, and younger looking.

Hand-free beauty treatment comes true, without any pressure, you will enjoy the skin treatment when doing other things.

- Wrinkle removal (red light—630nm)
- Skin rejuvenation (yellow light—590nm)
- Acne killer (blue light—470nm)
