

3DX AI Skin Analyzer

The 3DX AI Skin Analyzer is a professional skin analysis system designed to help aesthetic clinics gain a more detailed understanding of their clients' skin before recommending treatments or skincare programmes.

Using advanced imaging and skin-analysis technology, the system provides practitioners with a structured way to assess visible skin characteristics — including fine lines and wrinkles, pigmentation, uneven skin tone, pores, texture, congestion, redness, oil-related concerns and hydration — and create more personalised treatment recommendations. Results should always be interpreted by a trained professional alongside the client's consultation and skin history.
