

BodySculptor

A professional body-sculpting platform designed to support body contouring, muscle stimulation and targeted fat reduction, creating a more defined and sculpted appearance without surgical intervention.

Treats: body contouring, muscle toning, abdominal sculpting, buttock sculpting, body definition, targeted fat-reduction programmes and non-invasive body shaping. Important: the current Laser Aesthetics South Africa Products page confirms BodySculptor as part of the Slimming category, but a current detailed BodySculptor product listing with verified technical specifications could not be found — specific Tesla, frequency, power, applicator or treatment-time figures are deliberately withheld here until Laser Aesthetics confirms the exact BodySculptor model/configuration.
